

## Structural Biology postdoctoral position at University of Maryland

A postdoctoral position in the Herzberg lab at the Institute of Biosciences and Biotechnology research (IBBR) of the University of Maryland is available to study the structure of novel proteins associated with Lyme disease. IBBR is located on the University of Maryland Shady Grove campus and houses research groups from the campuses at College Park and Baltimore as well as from the National Institute for Standards and Technology. The institute has strong focus on addressing health and biotechnology challenges using structural biology approaches. We collaborate with Utpal Pal from the Department of Veterinary Medicine, UMD, who is an internationally recognized expert in the biology of Lyme disease. The ultimate goals of the research program are to advance the understanding of the disease mechanism and develop new therapeutic strategies.

Applicants should be eligible for employment in the U.S. and have good verbal and written scientific communication skills. Preference will be given to candidates with strong skills in molecular biology, biochemistry and tissue culture. Please submit CV and names and email addresses of two references to Osnat Herzberg, email address: [osnat@umd.edu](mailto:osnat@umd.edu).
