WK.01 Biological Small Angle Solution Scattering - Theory and Practice

Organizers: Richard Gillilan (MacCHESS, Cornell Univ.), Edward Snell (Hauptman-Woodward Medical Research Institute)

Track A: Honolulu/Kahuku

Track B: Oahu/Waialua

Small angle solution scattering (SAS) is experiencing a dramatic increase in popularity within the structural biology community. The availability of synchrotron radiation and neutron sources, commercial lab-source SAXS instrumentation, low-noise detectors, powerful computing hardware, and better algorithms, has made the technique accessible to a much larger audience than ever before. At the same time, biologists are investigating ever more complex systems that pose increasing challenges to conventional crystallography. Given that 75% to 80% of soluble, purified, protein samples fail to crystallize, having a solution-based technique that can provide some structural information is compelling. In addition, biological systems are studied more and more in the context of biologically relevant multi-macromolecule complexes. SAS is an excellent technique to pursue these problems.

This dual-track workshop brings together leading beamline scientists, experts in laboratory-based BioSAXS sources, and experienced users of the technique, to provide a unique, practical, "HOWTO" course in SAS data collection, processing, and interpretation. While a single day of lectures and computer exercises can hardly begin to cover the many powerful aspects of solution scattering, this course is designed to provide a foundation of essential information for any serious student wishing to apply SAS methods to problems in biology. Students will additionally have the opportunity to interact with experts to plan their proposed experiments.

Organizing committee: Michal Hammel (Advanced Light Source), Thomas Irving (Advanced Photon Source), Lin Yang (National Synchrotron Light Source), Thomas Weiss

(Stanford Synchrotron Light Source), Mark van der Woerd (Colorado State University), Matthew Benning (Bruker AXS), Gerd Langenbucher (Anton-Paar), Angela Criswell (Rigaku)

Workshop sponsors: Bruker, Rigaku, Anton Paar, Wyatt Technology, Incoatec, and Dectris

Track A: Getting Started in Biological Small Angle Solution Scattering: Your practical HOW TO Guide

The "Beginners Track" will focus on basic essentials and presumes that students have little or no previous SAS knowledge. The sessions will include both lectures and practical computer exercises. Emphasis will be placed on basic requirements for acceptable publication of SAS data. Topics also include sample preparation and guidelines for judging data quality, what to do about problematic (aggregated) samples, Guinier analysis, molecular weight determination, inverse Fourier methods and envelope calculations. Students will also learn some basics for home laboratory data collection and receive information about the various synchrotron BioSAXS beamlines. While this workshop is primarily focused on biological X-ray solution scattering, we expect to provide some content to raise student awareness on the unique opportunities and advantages presented by neutron scattering.

Speakers:

Angela Criswell (Rigaku), Javier Perez (Soleil), Srinivas Chakravarthy (APS), Jill Trewella (U. Sydney), Richard Gillilan (MacCHESS, Cornell U.), Andreas Keilbach (Anton Paar), Juergen Graf (Incoatec), Edward Snell (HWI).

Track B: Using Advanced Methods in Biological Small Angle Solution Scattering

The parallel “Advanced Methods Track” will cater to the needs of the growing pool of experienced BioSAXS users who have mastered basic SAS data collection and analysis and are ready to tackle more advanced analytical processing techniques. The session will focus on tools and proper techniques for evaluating SAXS data, molecular mass, and flexibility. Modeling software: FOXS, MES, FoxDOCK, AllosMod-FOXS. Topics also include inference-free data, similarity maps, heavy atom labeling, ensemble analysis, mixtures and size exclusion chromatography, NMR+SAXS, ab initio modeling at the residue level. Since many departments and multi-college consortia are starting to think about building lab-based BioSAXS facilities, a special lecture is planned which will help familiarize students with the various approaches and potential challenges for building lab source BioSAXS facilities.

Speakers: Robert Rambo, Michal Hammel, Greg Hura (ALS), Kushol Gupta (Perelman School of Medicine, U. Penn), Alexander Grishaev (NIH/NIDDK), Emre Brookes (U. Texas Health Sci Center), Andreas Keilbach (Anton Paar), Juergen Graf (Incoatec), Angela Criswell (Rigaku), and others.

WK.02 GSAS-II Workshop

Organizers & Instructors: Brian Toby and
Robert Von Dreele
Waianae

The workshop will introduce the attendees to the use of the new GSAS-II software package for the reduction, solution and refinement of crystallographic data, with particular emphasis on powder diffraction data. All software needed to install and run the software is freely available. The workshop will be targeted toward individuals with some experience with Rietveld analysis and to experienced single-crystal crystallographers with some knowledge of powder diffraction. Attendees are required to bring their own laptops with the software already downloaded. Installation instructions are found at <http://subversion.xray.aps.anl.gov/trac/pyGSAS>.

The GSAS-II software suite will be the eventual replacement for GSAS and its associated graphical user interface (GUI) package, EXPGUI, which are likely the most widely used crystallography software package for materials crystallography, particularly for neutron and synchrotron powder diffraction (Rietveld) fitting, but GSAS also sees use for neutron single-crystal analysis and combined x-ray single crystal/neutron powder diffraction analysis. As one measure of their importance, GSAS and EXPGUI together have received >7,000 citations and continue to be cited many hundreds of times annually.

The GSAS-II package has much wider goals than GSAS. Although over time its capabilities will continue to advance, the GSAS-II package already has capabilities needed for all aspects of powder diffraction crystallographic analysis, including area detector data reduction, indexing, and structure solution by charge flipping, in addition to the refinement and Fourier map analysis capabilities that duplicate GSAS features. GSAS-II can be used for analysis of constant-wavelength x-ray and neutron powder data, as well as X-ray and neutron single-crystal data. Oak Ridge National Laboratory has indi-

cated an interest in driving the adaptation for time-of-flight neutrons. GSAS-II is a completely modern code, written almost completely in Python and designed with a sophisticated GUI and with advanced visualization features integrated. GSAS-II is open source and is freely distributed. GSAS-II has recently been made available to the public, with the understanding that new capabilities are being added and bugs addressed on a continuing basis.

Because GSAS-II includes an area detector calibration and integration module, the software may be of interest within the APS where powder diffraction is used for calibration of area detector placement, or where radial integration is used.

The workshop will concentrate on use of GSAS-II for powder diffraction and will cover reduction of area detector powder diffracton images, structure solution and Rietveld structure refinement techniques. Attendees should bring their own laptops (Windows, Mac and Linux are all supported) and should install GSAS-II prior to the workshop. Help will be provided at the workshop to install the software for anyone who has had trouble.

WK.03 Get the Most out of the Cambridge Structural Database System

Organizer & Instructor: Pete Wood, (CSD)

Instructor: Colin Groom (CSD)

Kohala/Kona

The Cambridge Structural Database (CSD) is the world's repository for small molecule organic and metal-organic crystal structures. As such, this chemically diverse database of more than 600,000 molecules is a crucially important resource for pharmaceutical discovery, materials development, research and education. The Cambridge Crystallographic Data Centre (CCDC) not only distribute the CSD but also provide a comprehensive set of software tools that enable the valuable structural data to be searched, analysed, visualised and explored.

This workshop will introduce you to the database and its associated software, known collectively as the CSD System, and illustrate the use of these structural data in a variety of applications. The workshop is ideal for inexperienced and experienced users alike and will feature introductory presentations for each component of the CSD System followed by the opportunity to use the software hands-on guided by our illustrative tutorials. Our experienced staff will be available to assist with any questions you might have. At the end of the workshop there will be the opportunity to learn more about WebCSD or to trouble-shoot with our experienced tutors.

2013 Margaret C. Etter Student Lecturer Awards

Each Scientific Interest Group (SIG) has the opportunity to select one student to receive an award and to present a lecture in one of the sessions organized by that SIG. Selections are based upon submitted abstracts and are independent of whether the student originally requested an oral or poster presentation. Award winners are determined by the elected officers of the SIG. Students who are selected receive a monetary award of \$250 and a certificate to be presented at the beginning of their lecture.

POSTER PRIZES

Pauling Poster Prize, Canadian and IUCr Poster Prize

The Pauling Poster Prize established by the ACA and is supported by member contributions, to honor Linus Pauling. Pauling was one of the pioneers in American structural research and was very supportive of the ACA. At each annual meeting, the five best graduate or undergraduate poster presentations receive Pauling awards. Each award consists of \$200, a complimentary banquet ticket, and a copy of a Linus Pauling book.

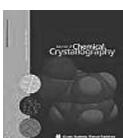

An additional Pauling Prize sponsored by the Canadian Division

of the ACA and the Canadian National Committee of the IUCr, will be given to the highest ranked graduate or undergraduate poster from a Canadian laboratory. Honorable mention awards for this prize are also made; they consist of a complimentary banquet ticket.

IUCr Poster Prize

The IUCr Executive Committee is pleased to continue a series of IUCr awards presented at meetings of the regional affiliates and national crystallographic associations. The award is complimentary online access to all IUCr journals for one year or a complimentary volume of International Tables or other IUCr publication.

Journal of Chemical Crystallography Prize

The best graduate or undergraduate poster presentation in the area of chemical crystallography or small molecule structure determination and analysis is sponsored by Springer's Journal of Chemical Crystallography <www.springer.com>. The winner will receive their personal choice of books from Springer's extensive portfolio of titles.

RCSB Protein Data Bank Poster Prize

Structural Dynamics

Structural Dynamics is a new open access and online-only journal which will begin accepting submissions in the fall of 2013. Co-published by ACA and AIP Publishing, it will highlight research articles on structural determination and dynamics of systems, enabled by the emerging new instruments (e.g. XFELs, electron sources, etc.) and new experimental and theoretical methodologies.

TOPICS INCLUDE:

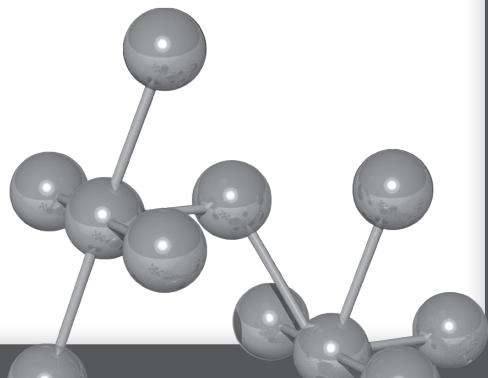

- ➔ Structural dynamics of molecular systems, biological systems, solid materials, liquids and solutions, and surfaces and interfaces
- ➔ Static structural determination, static imaging techniques and studies using highly coherent sources
- ➔ Dynamical studies of systems both in and out of equilibrium, with a time resolution from femtoseconds to milliseconds
- ➔ Spatial resolutions from 1 Å to 1 μm
- ➔ Electronic structure studies connected to molecular/lattice/protein structure

About the ACA

The American Crystallographic Association (ACA) was founded in 1949 through a merger of the American Society for X-Ray and Electron Diffraction (ASXRED) and the Crystallographic Society of America (CSA). The objective of the ACA is to promote interactions among scientists who study the structure of matter at atomic (or near atomic) resolution. These interactions will advance experimental and computational aspects of crystallography and diffraction. They will also promote the study of the arrangements of atoms and molecules in matter and the nature of the forces that both control and result from them.

Membership in the ACA is open to any person who is actively interested in the purposes of the Association and whose application is approved by the ACA Council or its designee. All members are entitled to voting privileges. Student members are very welcome and their contributions to the life and vigor of the association has always been important. The benefits of membership are the same in all categories. These include: voting privileges, ACA RefleXions, a newsletter that is published 4 times per year, complimentary subscription to the Newsletter of the International Union of Crystallography, and Physics Today, a monthly publication of AIP, and reduced rates for the International Tables for X-Ray Crystallography, Structure Reports, Journal of Applied Crystallography, and Acta Crystallographica when purchased for the member's personal use only. The ACA is a member society of the American Institute of Physics (AIP) and an Affiliate Member of the International Union of Crystallography.

The total membership of the ACA is about 2,000. National meetings are held annually. There are 12 Scientific Interest Groups (SIG) concerned with Biological Macromolecules, Fiber Diffraction, General Interest, Industrial, Materials Science, Neutron Scattering, Powder Diffraction, Service Crystallography, Small Angle Scattering, Small Molecules, Synchrotron Radiation and Young Scientists. Members may join as many of these groups that are of interest to them. Each SIG is responsible for organizing sessions at Annual Meetings at least every other year.

The headquarters of the association is located at Hauptman Woodward Medical Research Institute, 700 Ellicott St., Buffalo, NY 14203.
